

The screenshot shows the Eclipse IDE interface. On the left, the Package Explorer view displays several projects and files, including a main project named "springboot-Even-Webpage-main" which contains a "src" folder with "main", "java", and "com" subfolders, and a "Hello.java" file. The Hello.java code is shown in the central editor:

```
1 package com.klu;
2
3 import org.springframework.web.bind.annotation.GetMapping;
4
5 @RestController
6 @RequestMapping("/api")
7 public class Hello {
8     @GetMapping("/message")
9     public String getMessage() {
10         return "FSAD SEC-32";
11     }
12     @GetMapping("/secondyear")
13     public String getMessage1() {
14         return "Second Year";
15     }
16     @GetMapping("/saal")
17     public String getMessage2() {
18         return "FSAD Spring Boot";
19     }
20     @GetMapping("/spring")
21     public String getMessage3() {
22         return "FSAD";
23     }
24 }
25
26 }
```

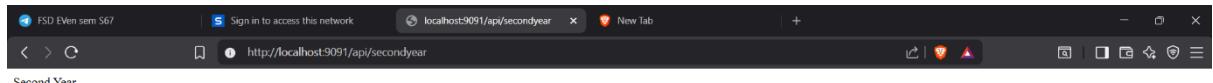

The Java console at the bottom shows the application's startup logs:

```
New configuration [Spring Boot App] C:\Program Files\Java\jdk-17\bin\javaw.exe (21 Jan 2026, 4:54:28 pm elapsed 0:00:17) [pid: 24096]
